

BROW COLOUR TREATMENT CARE

The science bit! Brow hairs are made up of three layers. The cuticle is the outer protective layer and is composed of flat cells which overlap (like roof tiles). Unlike chemical colours, henna and stain actually adds a further protective layer to the cuticle by working on it, not in it, enhancing not altering the colour and nourishing the hair.

BEFORE YOUR TREATMENT

- DON'T apply fake tan two days prior to your brow colour treatment as the DHA can alter the colour on your skin/hair.

POST TREATMENT

- Try keep the brows dry for at least 24 hours, this will help with the longevity of the skin stain.
- DON'T use any active skin care or receive any facial treatments (for 7 days) after having your treatment as this will strip the colour and effect the longevity.
- DON'T apply fake tan for two days following your henna treatment as the DHA can alter the colour on your skin/hair.
- DO use a hydrating oil, moisturiser or aloe vera to help extend your results.
